DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 12-13 are rejected under 35 U.S.C. 101 because:

The claimed invention is directed to non-statutory subject matter. Claims 12 and 13 are drawn to functional descriptive material NOT claimed as residing on a computer readable medium. MPEP 2106.IV.B.1(a) (Functional Descriptive Material) states:

"Data structures not claimed as embodied in a computer-readable medium are descriptive material per se and are not statutory because they are not capable of causing functional change in the computer."

"Such claimed data structures do not define any structural or functional interrelationships between the data structure and other claimed aspects of the invention which permit the data structure's functionality to be realized."

Claims 12 and 13 define a computer program product further defining only a computer program and do not define a computer program embodied on a "computer-readable medium" and are thus non-statutory for that reasons. A computer program (product) can range from paper on

Application/Control Number: 10/612,808

Art Unit: 2624

Page 3

which the program is written, to a program simply contemplated and memorized by a person. The

examiner suggests amending the claim to embody the program on "computer-readable medium" in

order to make the claim statutory. Examiner suggests the limitation be "A computer program

product comprising a computer readable storage medium encoded with a computer program..."

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in

this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Bellegarda et al.,

U.S. Patent No. 5,544,257.

Bellegarda discloses selecting a plurality of initial classifier models from a set of available

classifier models (col. 11, lines 55-60; figure 5, element 510 - selecting the classifier model (here

Markov model) from the available models and then selecting another model once done with

previous model);

producing an optimal representative classifier for each classifier model according to an

iterative optimization routine (col. 11, lines 60-65 - modeling component 208 calculates probability

which step further includes updating (optimizing) the model parameters according to an iterative

updating routine (col. 10, lines 25-67);

Art Unit: 2624

accepting the representative classifier having a best associated value for a fitness function (col. 12, lines 23-26- accepting the model which yielded the highest probability where the probability value being the associated value for a fitness function).

Regarding claim 12, the subject matter of claim 12 has been similarly analyzed and rejected as per claim 1.

5. Claims 2-6 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manav Seth whose telephone number is (571) 272-7456. The examiner can normally be reached on Monday to Friday from 8:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bhavesh Mehta, can be reached on (571) 272-7453. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished
